Overview

- Introduction
- Behavioral Contingencies
- Our Proposal
- Social Interactions in Facebook
- Final Remarks

Introduction

- Social network analysis:
 - social entities (people, actors or users) and their interactions and relationships
 - small-world principle
 - representation of relationships based on the interactions among users

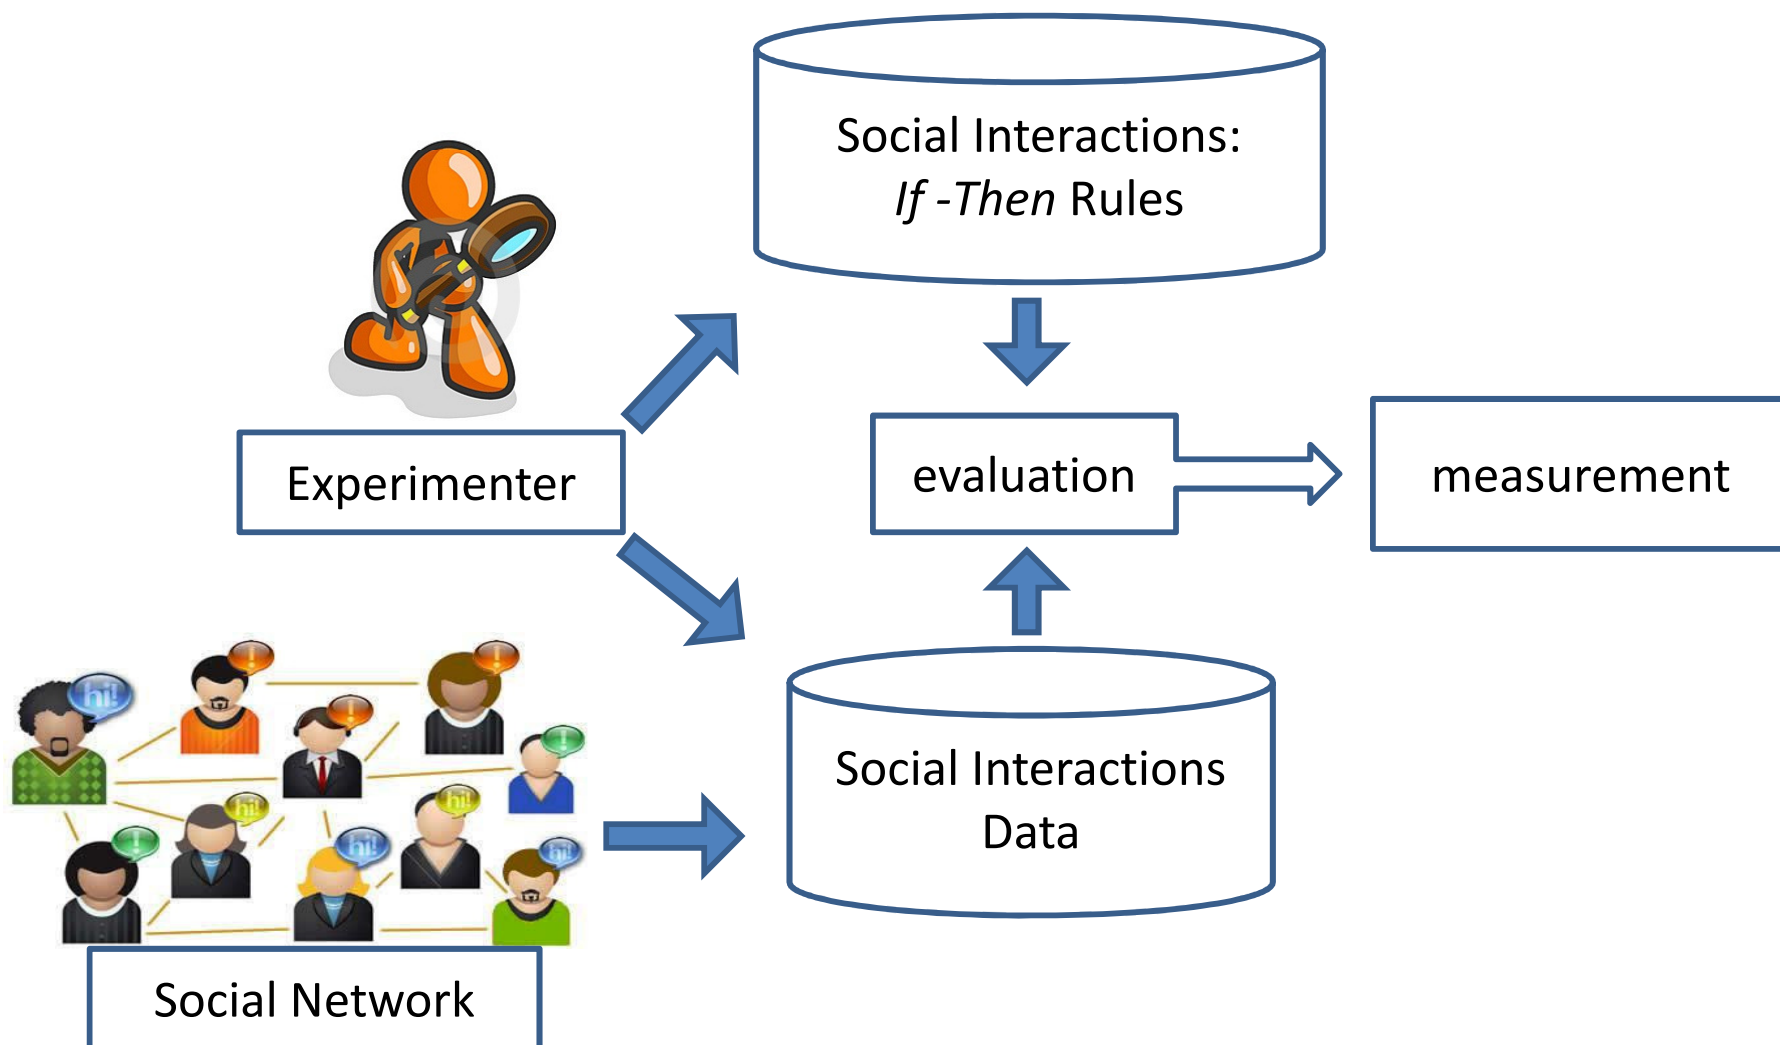

Introduction

- An opportunity for providing a human-readable model
 - the representation and the evaluation of situations which involve users in social interactions
 - making explicit
 - actions performed by users
 - the devices used, the media types involved in the interactions, etc...

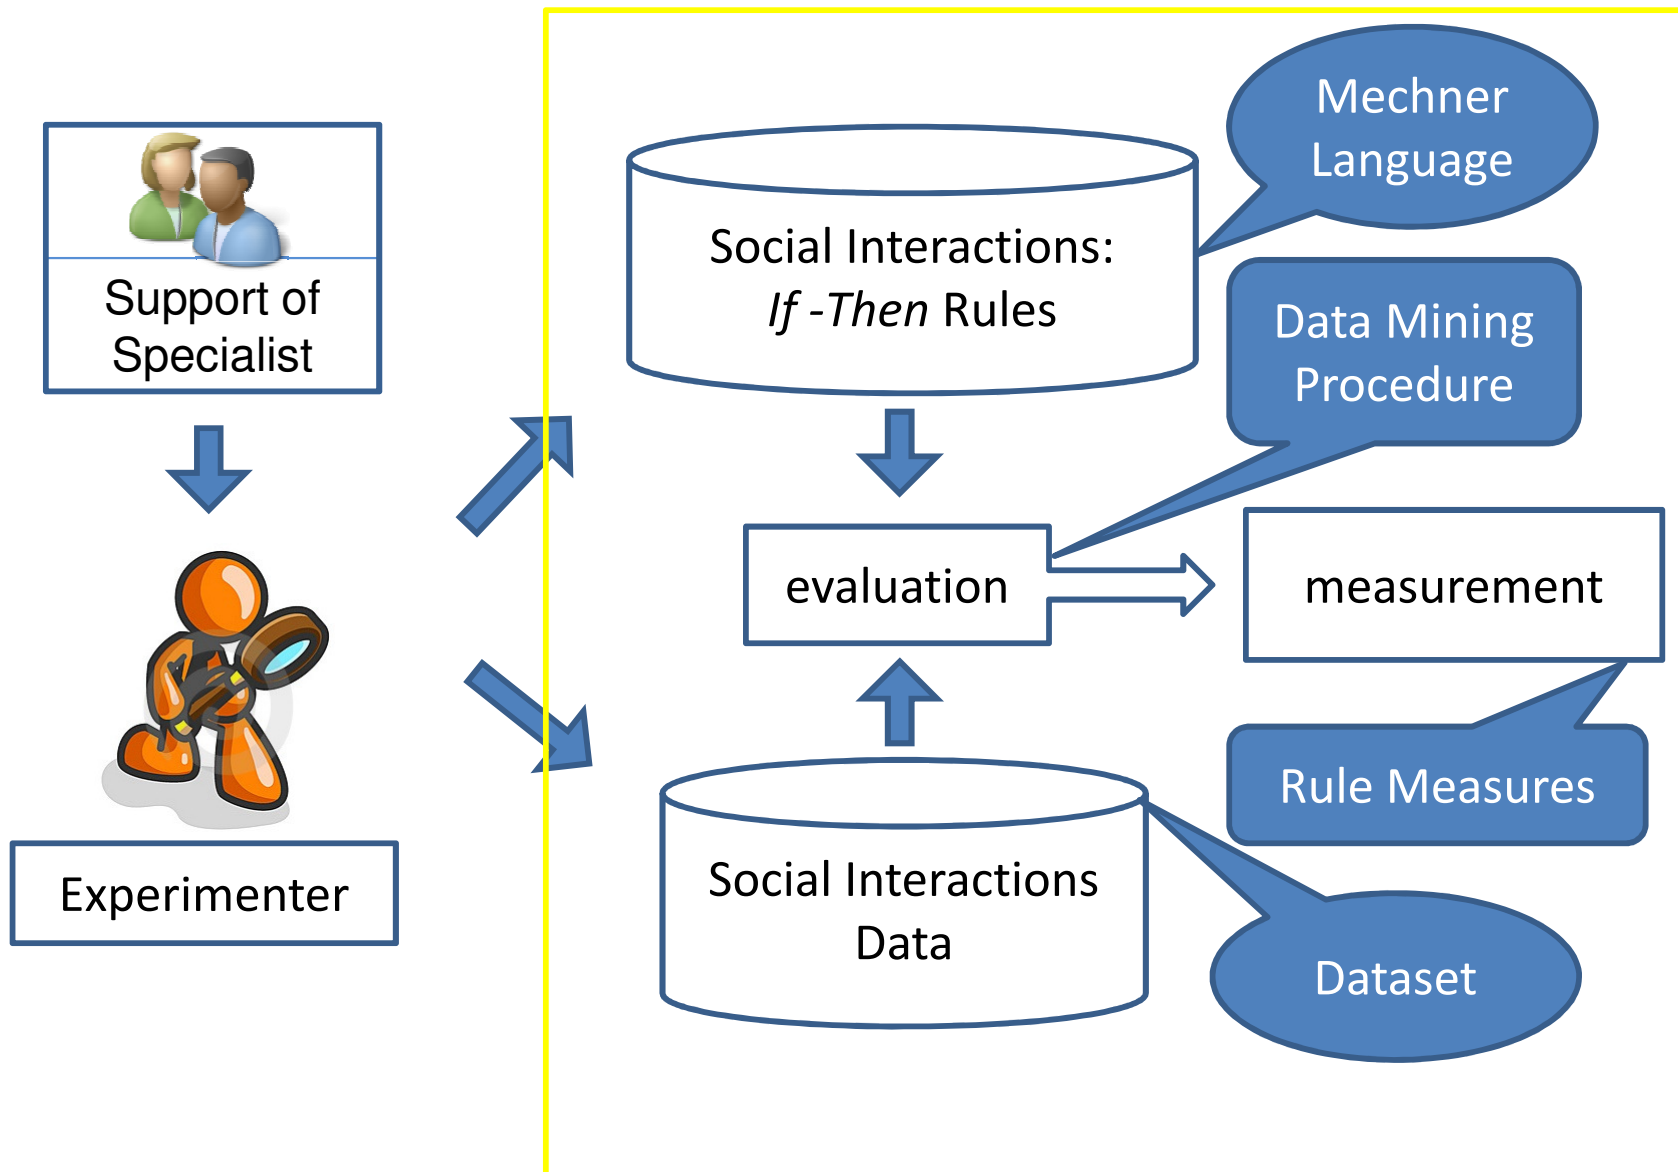

Behavioral Contingencies

- Experimental social psychology research
- Social interactions are behavioral contingencies:
 - *if-then* observations
 - describing what users do or not
- For instance:
 - a game setting may be analyzed to determine how the game is played as a set of *if-then* observations

Our Proposal

Our Proposal

Representing Social Interactions

- Merchner Language (Social Psychology)
 - Action (or actions) = $\{A1, A2, \dots, An\}$
 - Agent (actor) = $\{a, b, c, \dots\}$
 - Consequence $C = \{C1, C2, \dots, Cn\}$
- Example: $aA1 \cap bA2 \rightarrow abC1$

Measuring Social Interactions

$$aA1 \cap bA2 \rightarrow abC1$$

$$\text{Body} \rightarrow \text{Head} (B \rightarrow H)$$

$$n = hb + \bar{h}b + h\bar{b} + \bar{h}\bar{b}$$

	B	\bar{B}	
H	$n(HB)$	$n(H\bar{B})$	$n(H)$
\bar{H}	$n(\bar{H}B)$	$n(\bar{H}\bar{B})$	$n(\bar{H})$
	$n(B)$	$n(\bar{B})$	N

where

hb number of observations h and b true

$\bar{h}b$ number of observations h false and b true

$h\bar{b}$ number of observations head h true and b false

$\bar{h}\bar{b}$ number of observations head h and body b false.

n = number of observations

Measuring Social Interactions

Support

$$SupR = \frac{hb}{n}$$

Confidence

$$ConfR = \frac{hb}{hb + \overline{hb}} = \frac{hb}{b}$$

Cossine

$$CosR = \frac{hb}{n * \sqrt{\frac{h*b}{n^2}}}$$

... considering interactions in Facebook

Social Interactions in Facebook

Facebook profile page for Maria Da Graça Pimentel.

Navigation: Home, Search, Edit Profile

Profile Information:
Has worked at University of São Paulo Studied at Federal University of São Carlos Lives in São Carlos, Brazil Married to Cesar Teixeira From Itapetinga, Sao Paulo, Brazil

Activity:
Update Status Add Photo Ask Question
What's on your mind?

Recommendation:
Maria Da Graça Pimentel recommends a link.
TapIn - Bay Area **Yahoo uses Facebook to test six degrees of separation - San Jose Mercury News**
Yahoo and Facebook are joining forces to test an iconic 1960s-era social experiment that showed there are just six degrees of separation between most people on the planet.

Data from Facebook

- 1000+ user profiles
- Python crawler
- 3.328.248 actions
- 38.517 behavioral contingencies

Identifying Contingencies

Social interactions in Facebook:

- *A1 = Post on a Wall*
 - *photo, link, swf, video, text, etc..*
- *A2 = Comment a Post*
- *A3 = Like a post*
- *A4 = Mark a user*
 - *marking the name of a friend in a message*
- *C1 = notification of a Post (social stimulus)*
- *C2 = notification of a Comment*
- *C3 = notification of a Like*
- *C4 = notification of a Mark*

R2.3	100%	87.83%	93.72%	like
R2.4	100%	50.53%	71.06%	comment + like from same group

- like >
- comment >
- comment + like >
- comment + like from same group

Summary

- Facebook users are more engaged in social interaction involving *Likes* than *Comments*, and more engaged in interactions involving *Comments + Likes* than *Marks*
- the participation of the user *a*, who provides the social stimulus, with actions *Comment* and/or *Like* does not modify significantly the involvement of other users in social interaction.

Final Remarks: Contributions

- A novel technique for providing a human readable codification and measurement of social interactions
 - represented as behavioral contingencies
 - evaluated using data mining procedures
 - allows the representation and evaluation of social interactions, making explicit actions performed by the users

Final Remarks: Limitations

- The identification and representation of actions and consequences as behavioral contingencies depends on the subjective evaluation of the experimenter

Final Remarks: Future Works

- Current efforts involve measuring the impact of the media usage in the social interactions
- We plan to evaluate other social interactions in other social networks such as Google+, and use the evaluation of social interactions to provide guidelines for designers
- Recent results observed interactions involving
 - mobile devices
 - media assets (e.g. YouTube videos)
